Continuation Sheet (PTO-303)

Application No.

Continuation of 11, does NOT place the application in condition for allowance because: the claimed features, ie, providing, in response to a channel change event, a content recommendation, allowing a user to selectively view the recommended content or content associated with the newly selected channel, monitoring content viewed by a plurality of users, wherein the plurality of users is selected by the user; based on the content viewed by the plurality of users, generating the user perceptible indicator of at least a portion of the viewed content, wherein the generating occurs at a change in system state reads upon the references cited as follows. First, Alexander et al. does in fact teach providing, in response to a channel change event, a content recommendation. As applicant has pointed out, Alexander et al. does give a content recommendation with the "Watch List"; however, examiner disagrees with the assertion that it is not in response to a channel change event. Alexander et al. monitors the viewers usage pattern, ie. their channel change events, and based upon a channel change event recommends the watch list. Secondly, Alexander et al. also teaches allowing a user to selectively view the recommended content or content associated with the newly selected channel. Alexander et al. states in col. 18, lines 1-12, that when a user highlights a channel, the examiner interprets highlighting as a way of selecting, then additional content, which examiner interprets as content associated, is provided in a selectable way, ie. the linking to an external data source. Finally, Alexander et al. discloses wherein the plurality of users is selected by the user; based on the content viewed by the plurality of users, generating the user perceptible indicator of at least a portion of the viewed content, wherein the generating occurs at a change in system state. Applicant states: Alexander merely describes that actions of a particular viewer are monitored and used for creating an individualized profile and to distinguish between viewers. Examiner respectfully disagrees. In order to distinguish between different user profiles created by monitoring, then multiple profiles must be monitored. Alexander explicitly states, in detail, the feature of monitoring a plurality of users, with an indicator of viewed content in col. 28, lines 13-52. Therefore, Alexander et al. reads upon the claims as currently written.
